

FIVE SIMPLE WAYS

TO MINIMIZE THE IMPACT OF A SECURITY BREACH

01

EMPLOYEE TRAINING

According to the Privacy and Data Protection Team at Baker Hostetter, human error is the number one cause of data breaches. Not only does your company need strong security, but well-trained employees to eliminate mistakes.

02

IMPLEMENT ACCESS CONTROL

Your business needs to implement access control to ensure that every employee only has access to the resources necessary to perform their job. Access control isn't a software that can be installed over night, but a customized infrastructure that integrates into your environment.

03

RESTRICT WEBSITES & DOWNLOADS

Restrict employees from visiting malicious websites or downloading media files that may serve as an allegiance to data hackers. This will help reduce the risk of transferring downloadable media to an external source or exploiting the network.

04

DESIGN SECURE PASSWORDS

Strategies employed by password hackers have advanced to an incredible efficient level so it's imperative to create an unbreakable password. Consider a 12-character password and mix it up with capitalization, spelling, numbers, and punctuation.

05

VULNERABILITY ASSESSMENTS

Organizations should perform routine vulnerability assessments against both internal and external systems in their network. Establish a schedule, create an implementation plan, identify and analyze the network, validate the vulnerabilities, and review the findings. It's simple!

71% of security breaches target SMBs and more than 60% of them close within six months.

Do you have a data breach expense line in your 2017 budget?
Minimize the impact of when it happens and protect your company with Carrier Access.
